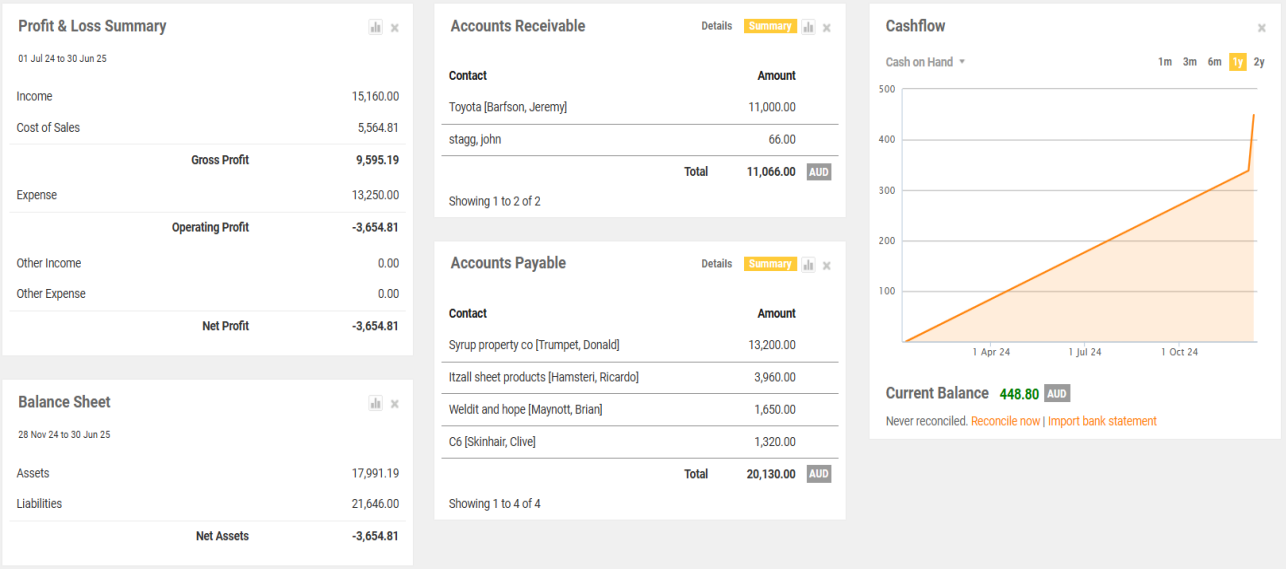
Corporate Transactions Saasu ERP Analysis

Saasu is a cloud-based accounting software designed for freelancers and small businesses. It offers financial management and reporting solutions, including automated bank feeds, reconciliation, and multi-currency support. It reduces manual data entry, ensures accurate account reconciliation, and maintains up-to-date financial records. Saasu's versatile features help maintain control and efficiency in business operations (Appvizer, 2025).

After manufacturing the “Beast”, we look at essential Saasu features such as the year-end dashboard for financial summary, inventory management, trial balance reporting and efficient tracking of accounts payable and accounts receivable tracking. All transactions are completed with cash in hand, guaranteeing that the company’s financial process runs smoothly and accurately.

Saasu Dashboard:



Profit & Loss Summary

01 Jul 24 to 30 Jun 25

Income	15,160.00
Cost of Sales	5,564.81
Gross Profit	**9,595.19**
Expense	13,250.00
Operating Profit	**-3,654.81**
Other Income	0.00
Other Expense	0.00
Net Profit	**-3,654.81**

Balance Sheet

28 Nov 24 to 30 Jun 25

Assets	17,991.19
Liabilities	21,646.00
Net Assets	**-3,654.81**

Accounts Receivable Details Summary

The Saasu dashboard offers a comprehensive view of essential financial data, including as profit and loss statements, balance sheets, and cash flow analysis. The profit and loss statement summarises income, cost of sales, gross profit, expenses, and net profit, offering a clear picture of corporate success. The balance sheet shows assets and liabilities, with a net asset value demonstrating the financial position. The cash flow graph records cash on hand over time, allowing for real-time monitoring of liquidity. This integrated dashboard empowers businesses to maintain accurate financial records and make informed decisions effectively.

Trial Balance:

Liability: Tax Collected from Sales		1,516.00
Total	**36,806.00**	**36,806.00**

A trial balance is a bookkeeping worksheet that compares the balances of all ledgers into equal debit and credit account totals. It is prepared periodically at the end of every reporting period to ensure the accuracy of a company's bookkeeping system. A trial balance is not a full audit but is often the first step in an audit procedure to detect any mathematical errors in the double-entry accounting system. If the total debits equal the total credits, the trial balance is considered balanced. However, improperly classified or missing transactions could still be material accounting errors that would not be detected by the trial balance procedure (Kenton, 2024).

Here are some of the Unusual Balances for Manager's Attention:

- **Subscription:** For $1,320 (gross), we bought a 12-month subscription to Classy Chassis Monthly, which ran from July to June. The trial balance only shows the portion up to December 31st, even though the supplier Clive's invoice was fully recorded. For correct reporting, the remaining subscription services, which run until June of next year, should be considered.

- **Rent:** $12,000 (net) was paid in advance for a 12-month lease that ran from September to August. The trial balance only shows the rent through December 31st, even though the entire Donald Trumpet invoice is recorded. Rent coverage must be allocated appropriately and lasts until August of the following year.

- **Tax Collected:** It is essential to make sure that all sales and purchase taxes are tracked down and paid on time. Tax payment delays or inconsistencies may result in fines, compliance problems, or even operational danger for the company. This needs to be closely watched.

- **Cash on Hand:** Just $448.80 is the year-end cash balance. To maintain corporate growth and operational continuity, this small sum necessitates strategic reinvestment in manufacturing and strict cost control.

These points draw attention to important areas that need precise changes and attention in order to prevent mistakes and maintain smooth financial operations.

Accounts Payable:

Accounts Payable Details Summary

Contact	Amount
Syrup property co [Trumpet, Donald]	13,200.00
Itzall sheet products [Hamsteri, Ricardo]	3,960.00
Weldit and hope [Maynott, Brian]	1,650.00
C6 [Skinhair, Clive]	1,320.00
Total	20,130.00 AUD

Accounts payable (AP) is the amount a company owes to its suppliers and is shown as a current liability on the balance sheet. It occurs when products or services are acquired on credit, with

payments usually due within 30 to 60 days or more. For example, the image shows that the company owes $20,130 AUD to many suppliers, including Syrup Property Co ($13,200 AUD) and Itzall Sheet Products ($3,960 AUD). It is critical to manage accounts payable properly at the conclusion of the fiscal year. A healthy AP balance indicates effective financial management and strong supplier relationships (Taulia, 2025). A higher accounts payable (AP) turnover ratio is preferable to a lower one because it indicates that a business is generating sufficient revenue to meet its short-term financial obligations. This reflects a healthy financial position and provides the business with stronger leverage to negotiate favourable terms with suppliers and creditors (Murphy, 2023).

However, the accounts payable process faces several challenges, including slow and inefficient manual processing, payment errors due to human mistakes or inadequate invoice matching, inconsistencies in manual bookkeeping, time-consuming data entry and inconsistencies in vendor formats, approval workflows, and delivery methods. These issues can lead to delayed payments, missed discounts, poor vendor relationships, audit risks, disputes, financial losses and increased fraud risk. Additionally, manual intervention and time spent processing invoices due to these inconsistencies can further exacerbate these issues (Rebello, 2024).

Accounts Receivable:

Accounts Receivable Details Summary

Contact	Amount
Toyota [Barfson, Jeremy]	11,000.00
stagg, john	66.00
Total	11,066.00 AUD

Accounts receivable indicate funds due to the company by clients for goods or services offered but not yet paid and act as a short-term credit. For example, Figure4 shows the accounts receivable summary at the end of the year, with outstanding amounts from two clients: Toyota [Barfson, Jeremy] with $11,000.00 AUD and Stagg, John with $66.00 AUD, for a total of $11,066.00 AUD. Payment durations can range from a few days to a year, depending on the agreement, with interest potentially accruing on overdue amounts. The summary highlights the company's requirement to collect these amounts in order to sustain a healthy cash flow (Hayes, 2024). Management seeks to reduce accounts receivable because it has a direct impact on the cash conversion cycle, a key measure of corporate liquidity. A shortened receivables time, combined with extended payables, improves the cash cycle, ensuring that the company remains successful and has more flexibility to reinvest profits and capitalise on growth prospects (Taylor, 2025).

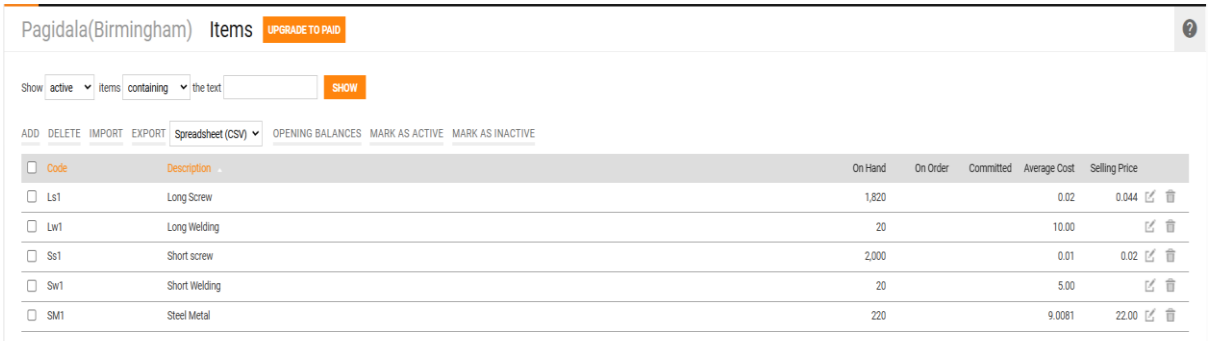
Furthermore, there are several challenges in accounts receivable. Slow payment cycles and manual processing cause delays in collections, straining cash flow. Tracking and reconciling payments can be error-prone and time-consuming, resulting in incorrect records. A high DSO (Days Sales Outstanding) indicates payment delays, which reduce liquidity. Disorganised ledgers

and poor customer communication complicate collections even more. Finally, ineffective policies, such as impractical credit incentives, exacerbate overdue invoices, with some businesses receiving up to 24% of their monthly revenue unpaid (Martinez, 2024).

Inventory:

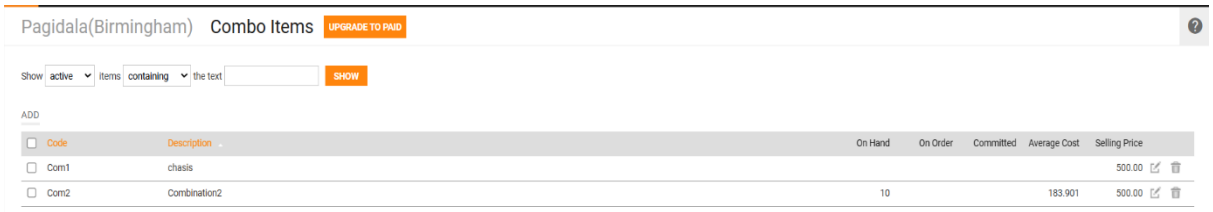
In our inventory system for manufacturing "Beast," we utilise two categories: items and combo items.

Items:



Setting up items that you purchase and/or sell for your company is done via the Inventory Item. This might also be for more commoditised billing of time and services (Saasu, 2018). As illustrated in the image, we have added several items to our inventory. As illustrated in the image, we add different things to our inventory. The item inventory shows data like on-hand amount, average cost, and selling price, and even allows us to apply discounts to the items while adding them.

Combo items:



Products, packages, or services created from separate inventory items are known as combo items. Usually, they are completed products composed of other inventory items. Consider the Combo Items Inventory to be a different warehouse from the Items Inventory, as this is how stock-on-hand figures are handled (Saasu, 2018). Similar to inventory items, combo items also display details such as on-hand quantity, average cost, and selling price.

Management needs to take action on Inventory based on the following factors:

- Review Stock Levels
- Evaluate Slow-Moving Items
- Assess Quality and Obsolescence

- Price Review
- Price Adjustment
- Differentiation
- Promotional Campaigns

If a competitor starts selling identical products for $175 while we continue to sell them for $500, it might have a major impact on our sales and market share. Customers may be drawn to the cheaper price, particularly if the competition has equal quality or features, resulting in a potential loss of business. Our higher prices may appear unreasonable unless we can differentiate our goods with improved quality, additional features, or better customer service. To remain competitive, we may need to reconsider our pricing approach, maybe lowering our prices or offering promotions while simultaneously emphasising the unique value of our products, increasing efficiency to cut costs, and reinforcing client loyalty. Otherwise, we risk losing clients and market share.
